

David Heath

1101 Juniper Street NE
Unit 211
Atlanta, Georgia, 30309
Phone: 770-361-6450
Email: heath.davidanthony@gatech.edu

Area of Study

Cryptography; Secure Multiparty Computation

Education

- 2016-Present **PhD in Computer Science**, Georgia Institute of Technology, Atlanta, Georgia
Advisor: Vladimir Kolesnikov
GPA: 4.0
- 2010-2014 **BS in Computer Science**
BS in Mechanical Engineering, Georgia Institute of Technology, Atlanta, Georgia
Honors: Summa Cum Laude

Research Experience

- 2018-Present **Graduate Research Assistant**, Georgia Institute of Technology, Atlanta, Georgia
Advisor: Vladimir Kolesnikov
- I co-discovered “stacked garbling”, a fundamental improvement to the Garbled Circuit cryptographic primitive. Stacked garbling greatly accelerates the secure handling of programs with conditional branching. Subsequently, found similar improvements to other secure computation protocols.
 - I co-discovered “one-hot garbling”, a fundamental improvement to the Garbled Circuit cryptographic primitive. One-hot garbling greatly accelerates the secure handling of vector operations.
 - I improved the efficiency of “garbled RAM” by multiple orders of magnitude. Garbled RAM allows the secure handling of random access arrays.
 - I developed crypto-technical improvements to interactive Zero Knowledge. These improvements culminated in a system that handles proofs expressed as off-the-shelf C programs and runs them in the 10KHz range.
- 2016-2018 **Graduate Research Assistant**, Georgia Institute of Technology, Atlanta, Georgia
Advisor: William Harris
- I co-developed “Shara”, a new solver for “Constrained Horn Clause” (CHC) systems. CHC systems can be used to formalize programs; solvers for such systems can prove interesting properties of programs.
 - I co-developed “Pequod”, a solver that automatically deduces the equivalence of programs.

Professional Experience

- 2014-2016 **Research Engineer I**, Georgia Tech Research Institute, Atlanta, Georgia
As part of GTRI's Electronic Systems Laboratory, I worked with safety-critical software systems and helped to verify the Future Airborne Capability Environment (FACE™) Technical Standard.

Awards and Grants

- 2020-2021 **Institute for Information Security and Privacy Cybersecurity Seed Funding**
Principal Investigator: Vladimir Kolesnikov
Georgia Tech's Institute for Information Security offers \$50,000 in funding to support promising research in the areas of cybersecurity. I drafted and collaborated on a submission with my advisor Vladimir Kolesnikov. The resulting submission "ZK for Anything and Anyone: Practical Zero Knowledge execution of arbitrary C programs" was funded.
- 2016-2020 **Georgia Tech President's Fellowship**
Georgia Tech offers a fellowship to the top 10 percent of PhD applicants.
- 2016-2020 **CS 700I Research Project Award**
Every Computer Science PhD student at Georgia Tech is required to take CS 700I, an introductory course to academic research. Each student is required to write and present work featuring research tasks conducted during the semester. I was presented an award for best research project as part of the Georgia Tech College of Computing Annual Awards and Honors ceremony.

Teaching Experience

- Fall 2019 **Guest Lecturer**, Special Topics: Secure Multiparty Computation
I gave two one-hour guest lectures in this graduate level special topics course. In the first lecture, I presented our new results on Stacked Garbling, both to share interesting new results and to convey a flavor of the research process. In the second lecture, I presented the EMP Toolkit, a state-of-the-art implementation of many multiparty computation techniques. I showed how this library can be used to solve problems via real-world C++ code.
- Spring 2019 **Graduate Teaching Assistant**, Special Topics: Blockchain
I generated course materials, held office hours, and graded homeworks and exams for this crosslisted special topics course on blockchain technologies. This was the first year this course was offered at Georgia Tech, so as a TA I had significant responsibility in helping to develop assignments and exams from scratch.
- Spring 2018 **Graduate Teaching Assistant**, Compilers and Interpreters
I generated course materials, held office hours, graded homeworks and exams, and gave one lecture for this undergraduate introduction to compiler technologies.
